

# Spirent CF20

For CyberFlood

Applications and Security Test Solutions

The CF20 for CyberFlood solution provides advanced test options for 1G, 10G, 40G and 100G interfaces. The CF20 tests the security effectiveness and performance of network infrastructures, web application infrastructure to verify your security posture, Quality of Service (QoS) and Quality of Experience (QoE). The CF20 uses the power of CyberFlood, offering you simplified use, by consolidating multiple test functions into a single small form factor appliance.

## Applications

- Verify security effectiveness with real attacks and exploits
- Test DDoS mitigation services and Next Generation Firewall
- Create extreme loads of HTTPs traffic to verify encryption capacity and performance
- Generate application load traffic from a growing database of over 9,000 user scenarios and application flows to verify application ID policies and performance
- Test with zero-day and up-to date malware samples
- Replay custom traffic at scale
- Advanced Fuzz testing to find unknown vulnerabilities creating millions of possible test scenarios quickly and easily

Understanding network security effectiveness and performance are crucial for today's demanding business environments, users today demand high-access and failsafe security. Proactively testing content aware networks and security infrastructures is now more accessible than ever with the Spirent CF20 CyberFlood testing platform. Spirent's CF20 is sized right and feature rich to meet very demanding security and performance testing needs. It's multi-speed allows for a wide array of use cases and covers the majority of network interfaces in use today with options from 1G to 100G for use in enterprises, data centers and service providers. The CF20 is a fully self-contained solution with built-in web-based test controller to manage test cases and assets and comes standard with advanced crypto-acceleration to create vast amounts of high-depth HTTPs traffic at scale.

# Spirent CF20

For CyberFlood

## User Realism with CyberFlood

CyberFlood utilizes TestCloud™ for access to thousands of applications so you can generate traffic with authentic payloads for realistic security, performance load and functional testing. CyberFlood creates tests with the latest apps from the Spirent TestCloud, while also providing the ability for users to import their own applications to recreate custom application at scale.

Quickly test with recent attacks and their variants like Wannacry, Petya, Crisis, Nemucod, Spora, Cerber and more, CyberFlood provides access to an always up-to-date database of thousands of attacks, real malware profiles and vectors, so you can test any mix of attacks and applications at scale. Quickly and easily determine how security polices work to defend against attacks while allowing legitimate user traffic to pass through as unimpeded as possible. Test with high scale volumetric and protocol DDoS to verify firewall policies are up to task.

## Find Unknown Vulnerability with Advanced Fuzzing

As an extensive solution CyberFlood has options for advanced fuzzing providing a virtually unlimited number of test fuzz cases for over 70 popular and current protocols including TLS v1.3. The advanced fuzzing options allows you to target an end point or test inline systems to find weaknesses and vulnerabilities

## Features & Benefits

- **Ease of Use**—Extremely easy to use and highly intuitive graphical user-interface that allows for difficult configurations to be set up instantly; from setting up global IPs from a world view map to drag and drop protocols, CyberFlood makes security and performance testing easy. The CF20 also offers a reduction in deployment and management complexity due to easy out-of-box setup.
- **Economical**—Access the power of CyberFlood with the right features, performance and capabilities in a low profile package without comprising on performance. In addition, there is also a reduction in cost ownership due to lesser requirements for rackspace, power and cooling.
- **Network Security Testing**—Provides extensive testing for secure network communication, vulnerability assessment with an evergrowing and up-to-date database over 3,000 exploit profiles and 17,000 malware samples.
  - Verify the ability of the network device to detect and mitigate thousands of known and zero day attacks.
  - With CyberFlood fuzzing test the resiliency of network devices and deployed protocols by verifying the ability to deal with millions of unexpected and malicious inputs.
  - Test device capabilities to inspect traffic for malware, infected hosts, unwanted URLs and spam and take appropriate action.
- **Applications**—With CyberFlood, users can quickly and easily test with the latest and most popular applications and attacks (updated continuously), all with unparalleled realism and scalability. Users can push their solutions to the limit while ensuring the infrastructure will stand up to real-world demands.
- **Power and Performance**—The right performance and scale: The CF20 provides the right performance profile to effectively exercise networks to find maximum user connectivity, application traffic throughput capabilities, and security effectiveness.
- **Built-in Cryptographic Acceleration**—The CF20 comes with standard built-in cryptographic acceleration technology to increase the scale of encrypted traffic rates and bandwidth, including strong and current cipher types.
- **Cross Compatibility**—The CF20 offers test compatibility with other CyberFlood platforms, this provide maximum flexibility for using CyberFlood tests across a multitude of available platforms.

## Technical Specifications

### Available Hardware Configurations

CF20 with 2xQSFP28 for 10G/40G/100G operation	<ul style="list-style-type: none"> <li>8x10G Fan out</li> <li>2x40G</li> </ul>	<ul style="list-style-type: none"> <li>2x100G</li> <li>Cryptographic Acceleration Module</li> </ul>	<ul style="list-style-type: none"> <li>Transceivers not included</li> </ul>
CF20 with 2xQSFP28 and 4x10G/1G—Coming soon	<ul style="list-style-type: none"> <li>4x10G/1G SFP+</li> <li>8x10G Fan out</li> </ul>	<ul style="list-style-type: none"> <li>2x40G</li> <li>2x100G</li> </ul>	<ul style="list-style-type: none"> <li>Cryptographic Acceleration Module</li> <li>Transceivers not included</li> </ul>
CF20 with 8x10G/8x1G—Coming soon	<ul style="list-style-type: none"> <li>8x10G/1G SFP+</li> </ul>	<ul style="list-style-type: none"> <li>Cryptographic Acceleration Module</li> </ul>	<ul style="list-style-type: none"> <li>Transceivers not included</li> </ul>

The CF20 with 2xQSFP28 interfaces is 25G and 50G capable with future license options

### Software License Options

Performance Testing Software	Comes with HTTP/HTTPs scale bandwidth, connectivity and rate testing, advanced mixed traffic testing custom traffic replay and DNS
Security and Performance Testing Software	Comes with All CyberFlood options covering CyberSecurity Assessment for malware and attacks, DDoS testing and all performance testing software options
TestCloud subscription	Allows options for always up-to-date download-able content for application scenarios, attacks/exploits and malware
Advanced Fuzzing	CyberFlood provides powerful options for fuzz testing over more than 70 distinct protocols

### CyberFlood Feature Details

Web Based Interface	Easy to use multi-user web-based interface makes setting up and executing comprehensive tests fast, easy and consistent
Application Scenarios	Over 9,000 current and popular application and user scenarios
Attack and Exploits	Over 3,000 attacks and exploits covering areas such as SQL injection, cross site scripting, targeted OS, in-line device, end point services and more
Malware	Over 17,000 recent and zero-day malware samples including command and control behavior and binary malware transfer scenario
DDoS	Test the DUT using different DDoS attacks to confirm its ability to detect and block them successfully with a suite of volumetric and protocol DDoS attacks that can be configured for stand-alone attack tests or mixed with normal user traffic to verify impact on performance
HTTPS/TLS Testing	Support for SSLv3, TLS v1.0, TLS v1.2, and TLS v1.3 with selectable certificate and cipher suites
CyberSecurity Assessment	Quickly create tests that verify the effectiveness of IDS, IPS NGFW and other security solutions with and without user load of traffic
HTTP Connections Tests	Open thousands to millions of new connections per second to ensure your DUT can handle the new connection rate of your network
HTTP Bandwidth Tests	Find the maximum throughput achievable using emulated, realistic HTTP clients and HTTP servers and leveraging a configurable network topology
HTTP Open Connection Tests	Open millions of concurrent TCP connections within the state table of your DUT to find the maximum concurrency it can support. Leverage HTTP as the protocol for added realism during this test
Mixed Traffic Tests	Measure the impact on application performance when using real-world built-in applications or extended with the power of TestCloud. Individually measure the bandwidth and success rate of each application added to the test to confirm the impact of the network under test
Traffic Replay	Replay your own traffic profiles at scale to determine the impact of customer traffic flows on network devices and services
DNS Tests	Overload your DUT by sending hundreds of thousands of DNS queries per second for it to process and traverse through it as well as for it to process the corresponding events that occur on the DNS responses
Fuzz Testing	Advanced fuzzing testing for end point, pass-through and server side fuzz testing with comprehensive monitors to verify test health and device restart control to bring systems back to known state and support for over 70 popular protocols

## Spirent Services

Spirent Global Services provides a variety of professional services, support services and education services—all focused on helping customers meet their complex testing and service assurance requirements. For more information, visit the Global Services website at [www.spirent.com](http://www.spirent.com) or contact your Spirent sales representative.

## Ordering Information

Due to the wide range of available system configurations, please contact your regional Spirent sales representative for detailed ordering information.

### Technical Specifications (cont'd)

Dimensions	(1U) 1.7" H x 16.8" W x 17.0" D; Fits standard 19" rack
Weight	17 lbs. (7.7 kg)
Operating Environment	5°C–35°C
Non-Operating Environment	0°C–50°C
Relative Humidity	10%–90% (non-condensing)
Power Requirements	115-230V, 50/60 Hz – 750W
Regulatory Approvals	FCC Part 15 Class A CE Mark Class A EN 55032:2012; EN 55024:2010; EN 61000-3-3:2013; EN 61000-3-2:2014

## Requirements

The client used to access the virtual host/CyberFlood controller must meet the following minimum requirements to run the CyberFlood:

- Any Windows, Mac or Linux PC running the latest browsers versions (June 2017 or greater)
- Firefox browser
- Google Chrome browser

## Spirent Services

### Professional Services

- Test lab optimization: Test automation engineering services
- Service deployment and service-level optimization: Vendor acceptance testing, SLA benchmarking, infrastructure and security validation
- Device scalability optimization: POC high scalability validation testing

### Education Services

- Web-based training: 24x7 hardware and software training
- Instructor-led training: Hands-on methodology and product training
- Certifications: SCPA and SCPE certifications

### Implementation Services

- Optimized new customer productivity with up to three days of on-site assistance
