Spirent **Spirent mX2 100 GbE Module**

High Performance & Scalability for High-Speed Ethernet Test

The Spirent mX2 100GbE test module with Cloud Core processing enables maximum performance and scale over high-speed Ethernet. Targeting testing of high-density multi-terabit routers and high-scale cloud infrastructure, ensures dataplane QoS with high performance traffic and verifies the scalability of routing, access, application and security protocols. With four 100GbE CFP2 ports per module, the 100GbE delivers the highest density high-speed Ethernet test solution per rack unit.

**Applications**

- **High Scale Terabit Routers**: Test 100GbE core routers with high scale, multi-protocol topologies
- **Data Center Fabrics**: Validate the forwarding performance and functional capabilities of ultra-high scale, next-generation multi-terabit cloud data center fabrics
- **High Capacity Multiservice Routers**: Validate IP throughput and Any G mobility with millions of subscribers and per-port line-rate data with minimum-sized packets and detailed per mobile statistics.

**Solution Overview**

The Spirent mX2 100GbE test module delivers a high density solution with the lowest total cost of ownership. It supports CFP2 optical modules which use a smaller form factor, use less power, and cost significantly less than CFP optics. The module also supports smart power control and fast boot to reduce test time and eliminate wasted power. The Spirent 100GbE CFP2 Ethernet modules are available in three levels of performance:

- mX2 for the highest available emulation performance
- fX2 mid-level emulation performance
- dX2 cost effective version

They are available in 4-port 100GbE variants. With the combination of Cloud Core processing and the deep real-time analysis that Spirent is known for, these modules deliver enhanced realism with scale and performance. The mx2 module offers the ONLY industry module supporting four form factor adapters supporting CFP2, CFP4, QSFP28, and CFP2 to CPAK adapter all with a single module lowering the total cost of ownership. No other module in the industry offers such versatility. The modules also support RS-FEC, Auto-Negotiation and associated PMD’s such as SR10, CR4, SR4, LR4, Active Optical Cables and various Direct Access Copper cable lengths for the supported form factors CFP2, CFP4 and QSFP28.

**Features & Benefits**

Testing 100GbE Ethernet-enabled routers or data center switches requires a tester that can emulate multiple layers of network protocols and scale to perform real-time cause/effect analysis on millions of statistics while putting the system through realistic scenarios, such as dynamic topology changes and fail-overs. The Spirent mX2 100GbE module’s Cloud Core processing and real-time cause/effect analysis enables testing highly-scaled terabit networks and devices. Cloud Core is based on several patent pending technologies designed to add elastic computing to the Spirent Layer 2-7 performance software platform. Cloud Core optimizes testing tasks across parallel processes, pooling processes across multiple X86 processor cores and threads. Test beds built on Cloud Core provide an exceptional combination of scalable performance and realism and are ideal for testing the most complex converged IP systems, such as cloud data centers and high-performance mobile networks.
Spirent mX2 100GbE Module
High Performance & Scalability for High-Speed Ethernet Test

Spirent mX2 100GbE test modules
- Spirent Cloud Core combined with Intel® Inside maximizes performance and scale of emulated topologies and stateful application traffic
- Scales to meet the requirements of IP/Ethernet mobile networks while maintaining enhanced realism and performance
- Benchmark Cloud Data Centers, Mobile Broadband and Application Experience
- Available test packages and integrated configuration wizards simplify and accelerate configuration, ultra-high scale mobility, mobile backhaul, routing, access and application test cases

Productivity
- Intelligent Results™
  - When creating test beds at the scale that Spirent mX2 100GbE can achieve, the amount of data that is produced is astronomical. An advanced and highly-efficient distributed database processes billions of real-time results to validate tests and identify problems, giving engineers the immediate feedback they need to debug problems and accelerate development
  - Delivers more results with tight correlation, and more information to find those obscure bugs. With more coverage and more information, Spirent answers questions faster and in a single test run where multiple runs are necessary with other test tools
  - Interesting streams uses real-time results data mining to dynamically filter through mountains of data and display the results that matter
- Powerful automation with Command Sequencer (Visual Programming) and GUI to Script empowers the test operator to:
  - Construct sophisticated, stressful, automated test cases without programming experience
  - Combine numerous individual test cases into a single run to save regression test time
  - Develop a catalog of broad automated test cases in a fraction of the time
  - Export automated test cases to run from a command line for headless test execution that can be integrated with any automated regression system

Extensive, flexible reporting: Real-time statistics for critical variables across all protocols. SNMP statistics can be gathered from the components under test and correlated with statistics from Spirent.

Flexible load specifications: Flexibility to specify load variables such as user sessions, new user sessions per second, transactions, transactions per second, connections or connections per second.

Technical Specifications (Cont.)

Layer 1

Layer 1 features
MDI0 register access with CFP2 optics support
Adjustable PPM, internal or external clock

Layer 2/3 generator and analyzer

Number of streams
16383 transmit and 16383 trackable receive streams; stream fields can be varied to create billions of flows

Frame transmit modes
Port based (rate per port), stream based (rate per stream), burst, timed

Min/max frame size (w CRC)
60 to 16,004 (Data plane)

Min/max Tx rates
5 packet per seconds to 101% of line rate

Real-time Tx stream adjustments
Change rate and frame length settings without stopping the generator or analyzer for truly interactive, cause and effect analysis

Advanced per-stream statistics
Over 40 measurements tracked in real-time for each received stream including:
  • Advanced sequencing: In-order, lost, reordered, late and duplicate
  • Latency: Avg, min, max and short-term avg; first/last frame arrival timestamp
  • Latency modes: LILO (forwarding delay per RFC 4689), LIFO (store and forward devices per RFC 1242) and FIFO (bit forwarding devices per RFC 1242)
  • Data integrity: IP checksum, TCP/UDP checksum, frame CRC, embedded CRC and PRBS bit errors

Measurement timestamp resolution
2.5ns generator/analyzer

Supported encapsulations
Layer 2: 802.3, Ethernet II, 802.1Q, 802.1ah, 802.1Qay, FCoE, PPP
Layer 3/4: IPv4, IPv6, TDP, LDP
Tunneled: GRE, L2TP, MPLS, PWE3

Advanced per-stream statistics available in real-time
Identify, display and filter by: Transmit stream ID, IPv4/v6 SA/DA, MAC SA/DA, IP TOS/DiffServ, TCP/UDP port, VLAN ID, VLAN priority, MPLS label, MPLS exp plus more

Capture triggers/filters
Oversize, jumbo, undersize, CRC error, checksum error, sequence number error, PRBS bit error
  • Trigger, oversize, jumbo, undersize, CRC error, checksum error, sequence number error, PRBS error

Capture memory
8MB

Layer 4-7 applications and security

IP version supported
IPv4/IPv6

Encapsulation protocols
802.1Q and 802.1 Q-in-Q

Transport protocols
TCP, UDP

Data protocols
HTTP, SIP and FTP, Unicast/Multicast RTSP and RAW TCP

Authentication protocols
802.1x

Voice protocols
SIP

Voice quality measurement
MOS R-factor

Video protocols
RTSP/RTP, Multicast Streaming, IGMPv2, IGMPv3 and MLDv2

Video quality measurement
MDI measurements along with additional statistics to detect picture quality

Protocol emulations enterprise and data center switch protocol support
Routing, multicast and bridging: All major IPv4 and IPv6 unicast and multicast routing protocols, IGMPv1/v2/v3, MLDv1/v2, LACP, STP, RSTP and MSTP – Data center: DCBX, FCoE, FIP, 802.1Qbb

Service provider
• Routing and MPLS: All major IPv4 and IPv6 unicast and multicast routing protocols, RSVP-TE, LDP, VPLS-LDP, VPLS-BGP, BGP/MPLS-VPN, Fast Re-route, mVPN, P2MP-TE, BFD, TWAMP and PWE3 (RFC4447)
  • Access: ANCP, PPPoE, DHCP, L2TP, IGMPv1/v2/v3, MLDv1/v2, DHCPv6 and PPPoE6
  • Carrier Ethernet and bridging: LACP, STP, RSTP and MSTP, 802.1ag CFM, Y.1731, PBB, PBB-TE, Link OAM
  • Mobile Backhaul: MPLS-TP as supported protocols

High Performance & Scalability for High-Speed Ethernet Test

About Spirent Communications
Spirent Communications (LSE: SPT) is a global leader with deep expertise and decades of experience in testing, assurance, analytics and security, serving developers, service providers, and enterprise networks.

We help bring clarity to increasingly complex technological and business challenges.

Spirent’s customers have made a promise to their customers to deliver superior performance. Spirent assures that those promises are fulfilled.
