

Spirent TestCenter™

OVSDB Emulation

Open vSwitch Database Management Protocol (OVSDB) Emulation based on RFC 7047 allows for configuration and learning of emulated Spirent TestCenter Topologies like OpenFlow Switch Emulation and VXLAN Emulation.

Topologies can write configurations and counters to database for reading by most controllers. Spirent TestCenter can view or export to file the OVSDB database.

VXLAN VTEPs can now learn using OVSDB vs Multicast or EVPN.

Features

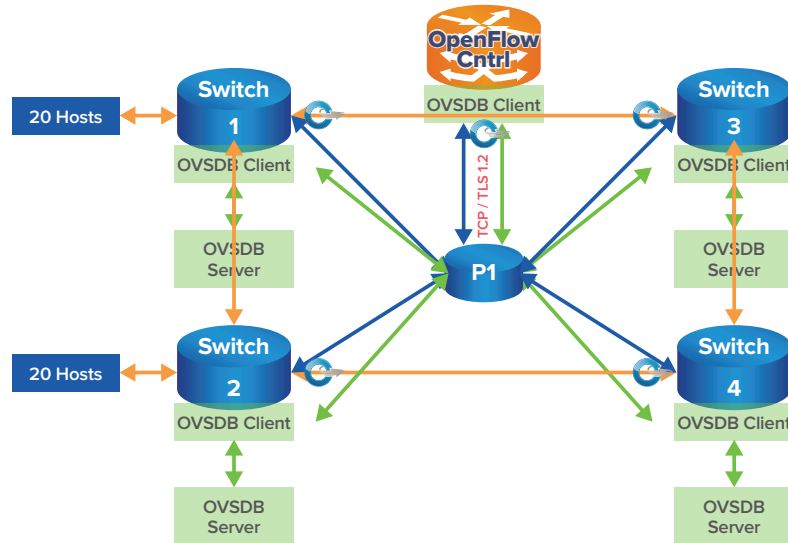

- TLS Secure Channel Connection
- Integrated with Spirent’s OpenFlow Switch Emulation and VXLAN packages
- Export and View any OVS Database
- Scales with the high-scaling packages of OpenFlow and VXLAN

Benefits

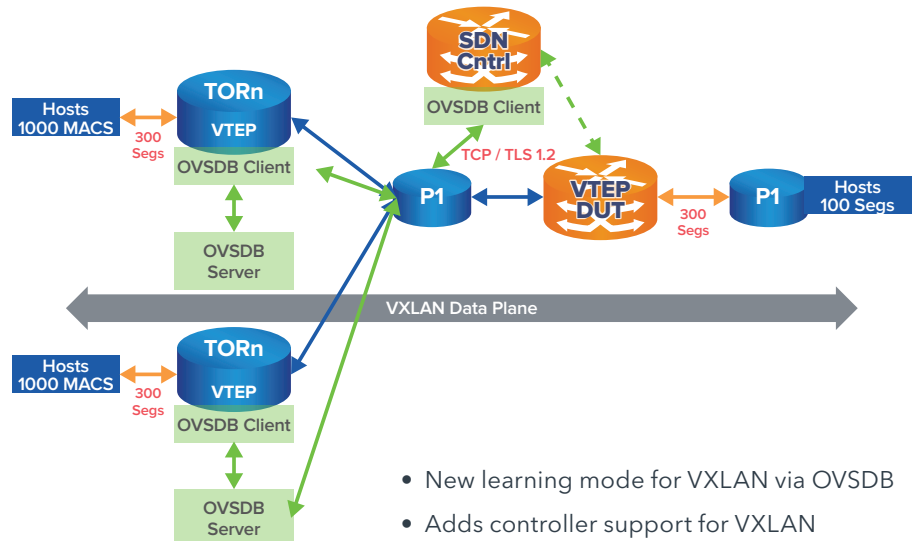

- Quickly assess the scalability of your OVS design and chosen controller
- Easily build and manage complex topologies and networks

Spirent’s OVSDB emulation package integrates with its VXLAN and OpenFlow Switch Emulation (OSE) Packages. OVSDB will gather configuration information from the OSE switch or VXLAN VTEP. Each Switch or VTEP will be associated with a Server which will optionally be connected to a SDN (OpenFlow) Controller.

OVSDB with OpenFlow Switch Emulation

OVSDB with VXLAN Emulation

- New learning mode for VXLAN via OVSDB
- Adds controller support for VXLAN
- High Scale Emulation
- VTEP/VM/Segment counters to database

About Spirent Communications

Spirent Communications (LSE: SPT) is a global leader with deep expertise and decades of experience in testing, assurance, analytics and security, serving developers, service providers, and enterprise networks.

We help bring clarity to increasingly complex technological and business challenges.

Spirent’s customers have made a promise to their customers to deliver superior performance. Spirent assures that those promises are fulfilled.
